

Installation of MarketGauge RealMotion Indicators on MetaTrader

1. From our website, download the file “MGRealMotion_MetaTrader.zip” – this will either give you the option to specify where you can save the file or it will automatically download it to your downloads folder.
2. The folder you downloaded contains one files that have to be unzipped. This can be accomplished several different ways:
 - a. You can right-click on the zip folder and select “Extract All...” A window will pop up where you can specify the destination for the files.

- b. You can open up the compressed folder, highlight the file or folder and right-click on it and select “Copy” – then “Paste” them onto your **desktop or any other folder**. (You can also use keyboard shortcuts “Ctrl-C” and “Ctrl-V”). Actual file name may appear different for each version.

- c. If you have WinZip or WinRAR installed, you can use either of those programs to un-compress the two files.

- d. The important thing is that you need to get the file outside of its original compressed folder.

3. Open up the MetaTrader platform. Go to the “File” menu and select “Open Data Folder...”

4. Place indicator to ... \MQL4\Indicators. Then compile.

5. You can now add the indicator to any existing chart and should appear similar to how it does below.

If you run into any issues installing this indicator, please contact us via email, chat or phone.
