

Installation of MarketGauge Triple Play Indicators on thinkorswim

1. Download the file “MGThinkorSwim.zip” – this will either give you the option to specify where you can save the file or it will automatically download it to your downloads folder.
2. The folder you downloaded contains two files that have to be unzipped. This can be accomplished several different ways:
 - a. You can right-click on the zip folder and select “Extract All...” A window will pop up where you can specify the destination for the files.

- b. You can open up the folder, highlight one or both files and right-click on them and select “Copy” – then “Paste” them onto your **desktop or any other folder**. (You can also use keyboard shortcuts “Ctrl-C” and “Ctrl-V”).

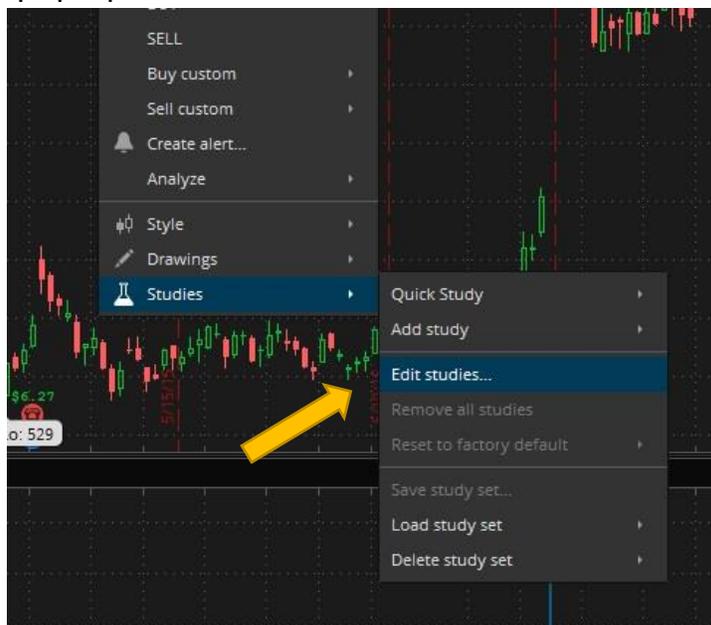

- c. If you have WinZip or WinRAR installed, you can use either of those programs to un-compress the two files.

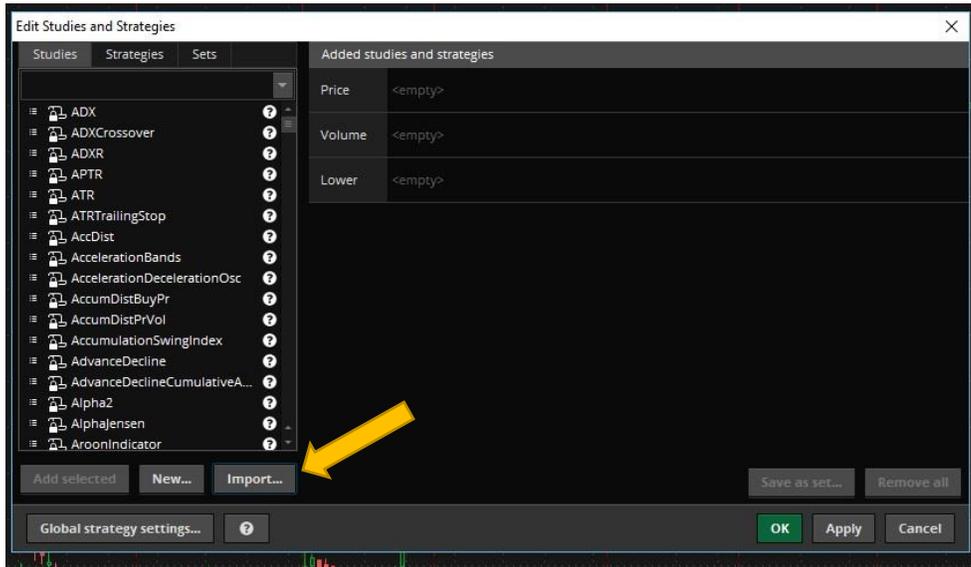

- d. **The important thing is that you need to get these two files outside of their original folder. Do not attempt to open these two files. Windows will think they are media/video files and attempt to play them.**

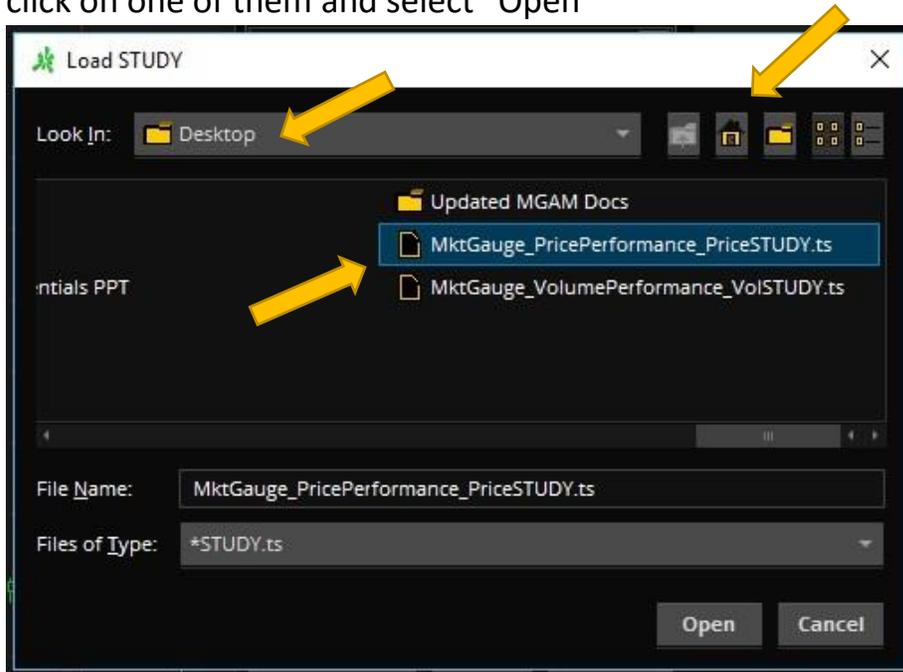

3. Open up the Thinkorswim platform. Go to a standard daily chart of any symbol other than “SPY.” The indicator will not run correctly on “SPY” because it uses the “SPY” data as one of the inputs.
4. Right click anywhere on the chart and select “Studies” and then “Edit Studies” in the second pop-up window.

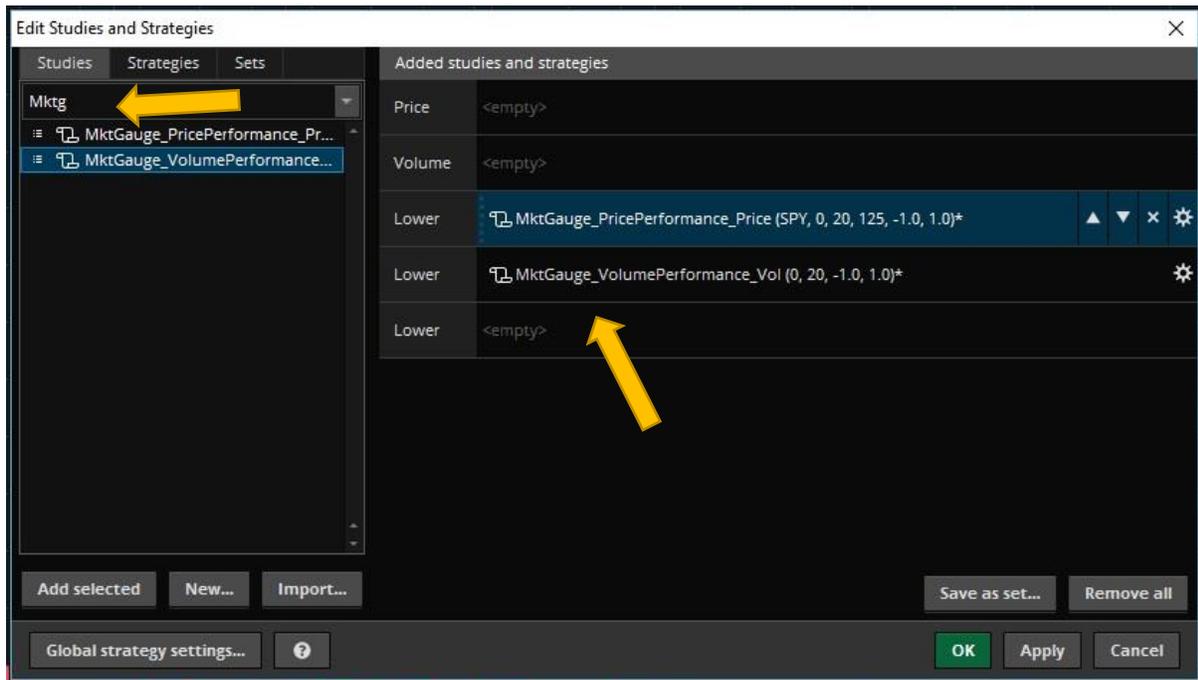

5. This will open up a new window titled: “Edit Studies and Strategies.”
Click on “Import”

6. This will open up another pop-up window titled: “Load Study”
From here you need to navigate and locate the two files you downloaded and un-compressed. They will either be on your desktop or whatever folder you put them in. The home icon will take you to your desktop. You can also use “Look in” dropdown to navigate to the file location. Once you locate these files, click on one of them and select “Open”

7. Use this same process to individually import each of the two indicators (PriceSTUDY and VolSTUDY).
8. Once both indicators have been imported, we can now add them to our daily chart. From the “Edit Studies and Strategies” window, we can search for our two indicators by typing “mkt” into upper left search box. Then we can add them to a chart by double-clicking on each or right-clicking and choosing “add selected.” When both have been added to a chart, they will show up in a “Lower” section as shown below on the right-hand side.

9. If both indicators are imported and added correctly, they will look something like the ones shown below. Your indicator colors and sizes will vary. You can now add these indicators to any chart or any other existing workspace.

10. If you run into any issues installing these indicators, please contact us via email, chat or phone.
